

What Does the Future Hold – Competencies

Upon mastering this module, you should be able to:

1. Explain “forward looking indicators.” List and describe 4 that help predict the rate of growth in population health strategies, going into the future.
2. Outline 3 key features of the new system that will eventually emerge, as health care delivery shifts into a “pay for value” future. Explain why mastery of clinical process management methods is essential to success – and survival – in that new world.
