

Disease Treatment vs Health – Competencies

Upon mastering this module, you should be able to:

1. List and explain the elements that make up the “job to be done” in health care delivery. Include a detailed break-out of each element.
2. Define “health.” Outline in detail the factors that determine health, including their relative contributions to a person’s total health.
3. Justify why it is more appropriate to call health care delivery a “disease treatment system” rather than a “health care system.”
4. Make the case for including both “disease treatment” and “health” as key components of health care delivery, going forward.
